

# CHP Engineer

## Job Purpose:

Due to further increases in work load from the Public & Private sectors we are now actively looking to appoint another CHP Engineer ideally based in the North West area.

## Main Duties:

- Costing, design and build of CHP projects
- Travelling nationwide to perform site surveys and evaluations
- Writing of concise reports and scope of supply documentation
- Client liaison

## Ideally you will have:

### General -

- Experience of CHP engines and associated equipment
- Experience dealing with small to medium sized projects ideally within the health or commercial business sector.
- Experience of Construction Design & Management (CDM)
- An understanding of CHP QA requirements
- Ability to plan program timescales
- An understanding of LTHW and steam systems
- Ability to calculate fluid flow, and sizing of pipework/ductwork
- An understanding of safety and maintenance requirements

### Specific –

- You should hold suitable mechanical / electrical qualifications
- Ability to use AutoCad 2D or 3D
- Minimum two years project experience
- Minimum two years experience with either CHP in general or specific to an engine supplier/manufacturer
- Ability to communicate at all levels, eg client, consultant, supplier and sub contractor
